

Scenario ID	JIRA ID name	Scenario Description
1	Removing reference files and related interface	Test Description: 1. Disable remove button until a reference file is selected. On selection of at least one reference file in the table, remove button should get enabled. 2. Selection of the remove button when no file is selected should not result in removal of any files. 3. Selection of remove button when one or more files are selected, should result in removal of all selected files from the system. Acceptance Criteria: TBD Testing Strategy: Negative - selection of disabled remove button (monitor & tablet) doesn't do anything Select a file → remove button becomes enabled HP: Any selected file(s) are removed when removed button pressed (monitor & tablet) Tools Used: N/A NOTE: 1. All the 3 monitors such as CORI monitor, Tablet and display monitors are connected to the console during execution. 2. Ensure Reference files are present in the Import Reference Files table for the respective scenarios. 3. Ensure the language is chosen by default i.e., English. 4. Ensure the PHI is set to default i.e., PHI access enabled.

Scenario
Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> Verify "Remove" button is disabled and non-functional when Import Reference Files table is empty .
Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> Verify "Remove" button is disabled and non-functional when no file is selected in the Import Reference Files table.
Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> Select any one file from the Import Reference table --> Verify "Remove" button is enabled and functional .
Navigate to Import Reference screen Files via Admin Login (Using Monitor) --> Select multiple files from the Import Reference table --> Verify "Remove" button is enabled and functional .
Navigate to Import Reference screen Files via Admin Login (Using Tablet) --> Select 3 consecutive files in between the list of files from the Import Reference table --> Verify "Remove" button is enabled and functional .
Navigate to Import Reference screen Files via Admin Login (Using Monitor) --> Select all the files from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Verify "Remove" button is enabled and functional --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Click "No" to the notification, verify notification disappears and "Remove" button is still enabled and functional --> Unselect all the files from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Verify "Remove" button is disabled and non-functional .
Navigate to Import Reference screen Files via Admin Login (Using Tablet) --> Select all the files from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Verify "Remove" button is enabled and functional --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Click "Yes" to the notification, verify selected file is removed by the confirmation message in the screen and "Remove" button is disabled and non-functional .
Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> Select any one file from the Import Reference table --> Verify "Remove" button is enabled --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Click "Yes" to the notification, verify selected file is removed by the confirmation message in the screen and "Remove" button is disabled and non-functional .
Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> Select any one file from the Import Reference table --> Verify "Remove" button is enabled --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Click "No" to the notification, verify notification disappears and "Remove" button is still enabled and functional .

Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> Verify "Remove" button is **disabled and non-functional** when Import Reference Files table is **empty** and **unselected** --> Navigate to Admin screen --> **Navigate back** to Import Reference Files screen --> **Verify "Remove" button is disabled and non-functional --> Select the checkbox** when the Import Reference Files table is **empty** --> Verify "Remove" button is **disabled** and **non-functional** --> Navigate to Admin screen --> **Navigate back** to Import Reference Files screen --> Verify "Remove" button is **disabled** and **non-functional** and also verify **the checkbox is unselected.**

Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> Verify "Remove" button is **disabled and non-functional** when **no files is selected** in the Import Reference Files table --> Navigate to Admin screen --> Select some random cases from the Case table --> **Navigate back** to Import Reference Files screen --> **Verify "Remove" button is disabled and non-functional.**

Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> **Select any one file** from the Import Reference file from the Import Reference table --> Verify "Remove" button is **enabled** --> Navigate to Admin screen --> **Navigate back** to Import Reference Files screen --> **Verify "Remove" button is disabled and non-functional and also verify the selected files are unselected.**

Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> **Select any one file** from the Import Reference file from the Import Reference table --> Verify "Remove" button is **enabled** --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" **notification pop-up** --> **Verify system doesn't allow to navigate to the Admin screen.**

Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> **Select any one file** from the Import Reference file from the Import Reference table --> Verify "Remove" button is **enabled** --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Verify system doesn't allow to navigate to the Admin screen --> Click **"No"** to the notification, verify notification disappears and "Remove" button is **still enabled** --> Navigate to Admin screen --> **Navigate back** to Import Reference Files screen --> **Verify "Remove" button is disabled and non-functional.**

Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> **Select any one file** from the Import Reference file from the Import Reference table --> Verify "Remove" button is **enabled** --> After clicking on the enabled "Remove" button, verify "Reference File Removal Confirmation" notification pop-up --> Verify system doesn't allow to navigate to the Admin screen --> Click **"Yes"** to the notification, verify selected file is removed by the confirmation message in the screen and "Remove" button is **disabled** --> Navigate to Admin screen --> **Navigate back** to Import Reference Files screen --> **Verify "Remove" button is disabled and non-functional with no confirmation message.**

Navigate to Import Reference Files screen via Admin Login (Using Monitor) --> **Remove all the files** --> Verify **select all files tick box is still selected** and "Remove" button is **disabled** and **non-functional** --> Click on **select all files tick box** when the table is **empty** --> Verify "Remove" button is **disabled** and **non-functional**.

Navigate to Import Reference Files screen via Admin Login (Using Tablet) --> **Remove all the files** --> Click on **select all files tick box** when the table is empty --> Verify "Remove" button is **disabled** and **non-functional** --> Navigate to Admin screen --> **Navigate back** to Import Reference File screen --> Verify "Remove" button is **disabled & non-functional** and the **tick box is unchecked**.

Navigate to Import Reference screen Files via Admin Login (Using Monitor) --> **Select all the files** from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Click on "Import" button --> Verify all the selected files are unselected and "Remove" is **disabled** and **non-functional**.

Navigate to Import Reference screen Files via Admin Login (Using Tablet) --> **Select all the files** from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Click on "Import" button --> Verify all the selected files are unselected and "Remove" is **disabled** and **non-functional** --> **Select all the files** check box --> Verify the "Remove" button is **enabled** and **functional** --> **Unselect all the files** checkbox --> Verify the "Remove" button is **disabled** and **non-functional** --> Navigate to Admin screen --> **Navigate back** to Import Reference File screen --> Verify the "Remove" button is **disabled** and **non-functional**.

Reboot the system --> Navigate to Import Reference screen Files via Admin Login (Using Monitor) --> **Select all the files** from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Verify "Remove" button is **enabled** and **functional** --> After clicking on the enabled "Remove" button, verify **"Reference File Removal Confirmation" notification pop-up** --> Click **"No"** to the notification, verify notification disappears and **"Remove" button is still enabled** --> **Unselect all the files** from the Import Reference table by clicking on the tick box at top right corner of the Import Reference Files table--> Verify "Remove" button is **disabled** and **non-functional**.
